

Red Deer Manlift Operator Certification

Red Deer Manlift Operator Certification - We offer an aerial lift and scissor platform training and certification to empower the trainee with the knowledge and general understanding of the safe and efficient use of "Power Operated Mobile Work Platforms," in accordance to the existing regulations in the industry. Upon successfully completing the training, the participants would be able to know and understand certain health and safety related hazards connected with making use of scissor and aerial lifts.

There are a variety of affiliated locations in your district offering Manlift Operator Certification Programs. Trainees are provided with in-depth instruction about safe use and regulations together with extensive hands-on training. The level of skill and knowledge of every one training is evaluated and those who could demonstrate a satisfactory level of operational competence will be given Operator Certification cards and employee documentation.

Theory Training

The trainer guides those training through an interactive and comprehensive review during the theory training. The operator manual is studied which covers all applicable regulations. Other subject matters like for example safe operating procedures, different equipment kinds including different sizes and associated applications, pre-use inspections and general work place safety are explored individually.

Theory Evaluation

The evaluation of the theory parts begins with a written exam, that focuses on the course concepts which was included in the reference instruction manual. Exams are graded and returned to the one training. The tests are then reviewed to guarantee understanding and a minimum score of 70% is considered necessary so as to pass this portion of the training.

Practical Training

The practical training is included in the hands-on part. It is here that the trainees are shown the safe operating procedures, like for instance the parking and shutdown measures and the pre-use inspection measures. Each one training has the chance to operate the machinery and practice the skills they learned during Theory Training under the program trainer's helpful eye in an environment which is safety controlled.

Practical Evaluation

The evaluation of the practical part is where the trainee is evaluated as to whether they have the minimum level of skill. Those training are individually tested on their skills using the machine in a somewhat difficult course environment. As soon as the evaluation is finished, the ones training are de-briefed and given the opportunity to deal with whichever issues they may have about whatever portion of the course. Each employer of a successful trainee would be given the official records and documents soon after the program has been finished.
